Fundamentals of Natural Gas Measurement

Physical Properties of Natural Gas

Understanding the physical properties of natural gas is fundamental to accurate measurement:

Volume vs. Energy Content: Gas is usually measured in volume (e.g., cubic feet, cubic meters) but ultimately valued based on energy content (e.g., BTU, Joules).

Compressibility: Gas is compressible, so volume changes with pressure and temperature.

Composition Variability: Variations in methane, ethane, propane, and other constituents impact heating value and flow measurement.

Measurement Principles

Flow Measurement: Quantifies the amount of gas passing through a pipeline per unit time.

Pressure and Temperature Measurement: Necessary to correct flow rates to standard conditions.

Calorific Value Assessment: Determines the energy content of the gas.

Types of Measurement Devices and Techniques

Differential Pressure Flow Meters

Orifice Plates: Most common, simple, and cost-effective; measure flow based on pressure differential.

Venturi Meters: Similar to orifice but with a converging-diverging shape, offering lower pressure loss.

Flow Nozzles: Used for high-accuracy measurements over a range of flow rates.

Turbine and Ultrasonic Meters

Turbine Meters: Mechanical devices that use a rotor to measure flow velocity.

Ultrasonic Meters: Use sound waves to determine flow velocity; highly accurate and suitable for bi-directional flow.

Other Measurement Methods

Coriolis Meters: Measure mass flow directly; excellent for high accuracy but more expensive.

Rotary Meters: Common in smaller applications; measure volumetric flow.

Measurement Process and Best Practices

Site Selection and Installation

Proper Piping Design: Minimize disturbances, avoid elbows and valves near the meter.

Straight Run Requirements: Ensure sufficient upstream and downstream lengths for laminar flow (typically 10-20 pipe diameters upstream, 5-10 downstream).

Accessibility: Allow space for calibration, maintenance, and inspection.

Calibration and Verification

Factory Calibration: Devices should be calibrated at the manufacturer before installation.
