dilation of the distal ureter within the bladder, often associated with duplicated collecting systems. Neurogenic Bladder: Dysfunction of bladder control due to neurological impairment. Hydronephrosis: Swelling of the kidney caused by urine buildup, often diagnosed prenatally. Congenital Obstructions: Such as posterior urethral valves or ureteropelvic junction obstruction. Urological Tumors: Wilms tumor being the most common renal tumor in children. Each condition is often illustrated with clinical images, diagrams, and case studies within an atlas to aid rapid recognition and understanding.

Applications of the Pediatric Urology Atlas in Clinical Practice

The practical applications of such atlases extend across multiple domains:

- Diagnosis** Recognize subtle anatomical variations Interpret imaging studies accurately
- Correlate** clinical signs with anatomical findings
- Treatment Planning** Choose appropriate surgical or conservative interventions Visualize procedural steps before surgery Anticipate potential complications
